Stargazers

Each data point corresponds to at least one stargazer event. The time resolution is one day.

Forks

Each data point corresponds to at least one fork event. The time resolution is one day.

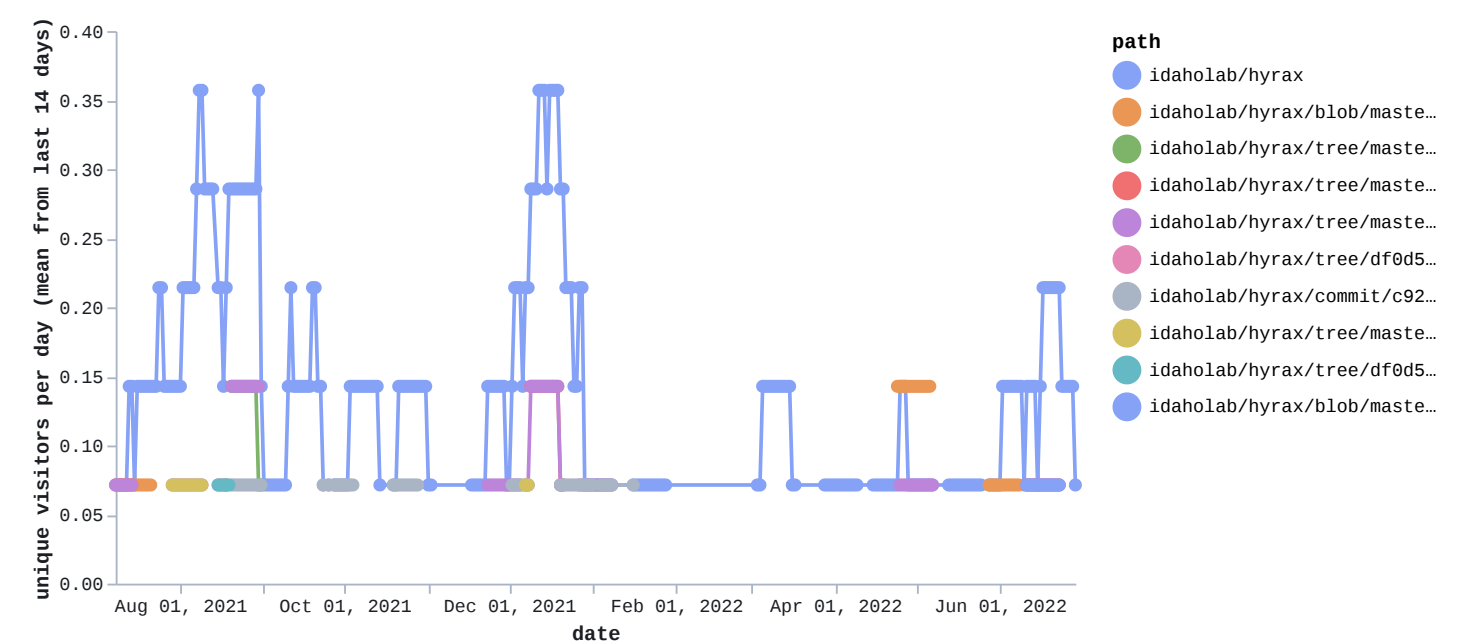

Note: Each data point in the plots shown below is influenced by the 14 days leading up to it. Each data point is the arithmetic mean of the “unique visitors per day” metric, built from a time window of 14 days width, and plotted at the right edge of that very time window. That is, these plots respond slowly to change (narrow peaks are smoothed out).

The chart displays the mean number of unique visitors per day over a 14-day rolling window for three referrers. The y-axis ranges from 0.00 to 0.24. The x-axis shows dates from August 2021 to June 2022. The 'referrer' legend indicates: github.com (blue), Google (orange), and m.baidu.com (green). The data shows significant volatility for github.com, with peaks around 0.215 in late August 2021 and 0.145 in late May 2022. Google shows a peak around 0.145 in late May 2022. m.baidu.com remains consistently low, near 0.07.

date	github.com	Google	m.baidu.com
2021-08-01	0.07	0.145	0.07
2021-08-15	0.145	0.07	0.07
