Stargazers

Each data point corresponds to at least one stargazer event. The time resolution is one day.

Forks

Each data point corresponds to at least one fork event. The time resolution is one day.

Note: Each data point in the plots shown below is influenced by the 14 days leading up to it. Each data point is the arithmetic mean of the “unique visitors per day” metric, built from a time window of 14 days width, and plotted at the right edge of that very time window. That is, these plots respond slowly to change (narrow peaks are smoothed out).

The chart displays the daily mean number of unique visitors from August 2021 to April 2022, categorized by referrer. The y-axis represents 'unique visitors per day (mean from last 14 days)' ranging from 0 to 35. The x-axis represents 'date' with labels for Aug 01, 2021, Oct 01, 2021, Dec 01, 2021, Feb 01, 2022, and Apr 01, 2022. The legend identifies the following referrers: Google (blue), mooseframework.inl.gov (orange), github.com (green), moose.inl.gov (red), groups.google.com (purple), cn.bing.com (pink), DuckDuckGo (grey), Bing (yellow), civet.inl.gov (teal), and com.google.android.gm (light blue). Google and mooseframework.inl.gov show the highest visitor counts, fluctuating between 10 and 28. Github.com and moose.inl.gov show lower but increasing visitor counts, with moose.inl.gov reaching around 3 by April 2022. The other referrers show very low and stable visitor counts throughout the period.
