Stargazers

Each data point corresponds to at least one stargazer event. The time resolution is one day.

Forks

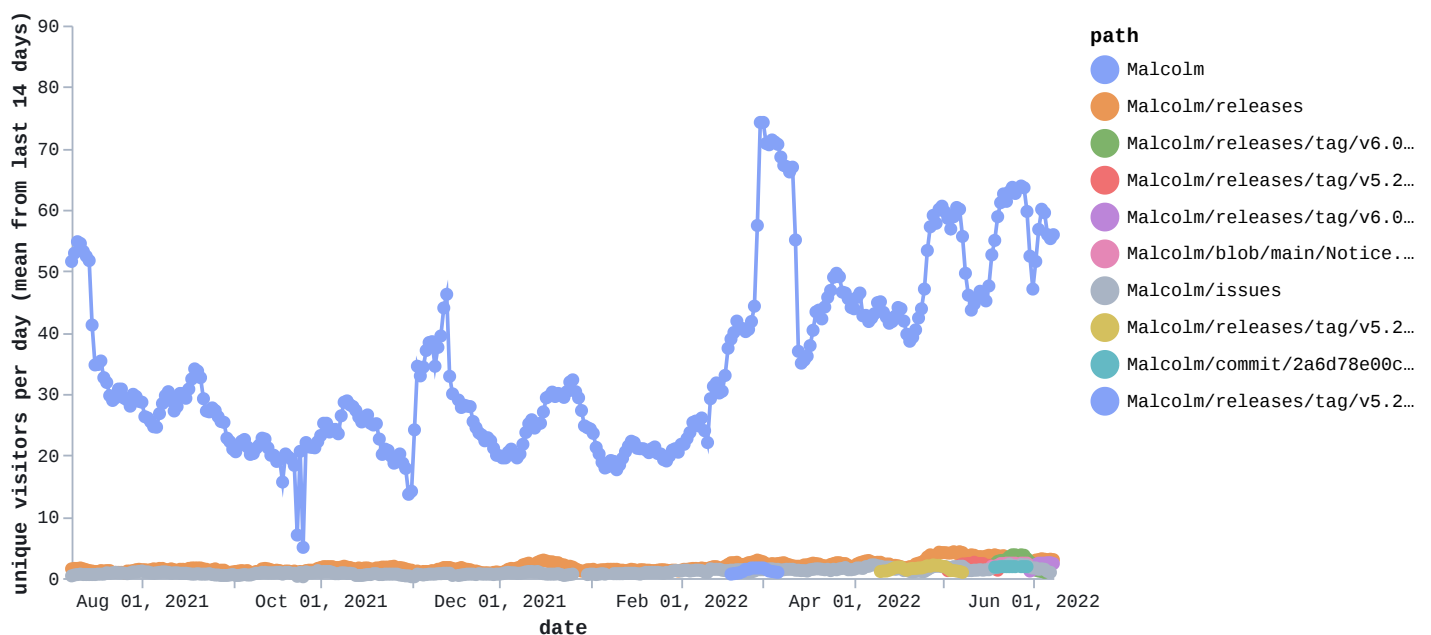

Each data point corresponds to at least one fork event. The time resolution is one day.

Note: Each data point in the plots shown below is influenced by the 14 days leading up to it. Each data point is the arithmetic mean of the “unique visitors per day” metric, built from a time window of 14 days width, and plotted at the right edge of that very time window. That is, these plots respond slowly to change (narrow peaks are smoothed out).

The chart displays the daily mean number of unique visitors from various referrers. The y-axis represents 'unique visitors per day (mean from last 14 days)' ranging from 0 to 40. The x-axis represents 'date' from August 2021 to June 2022. The legend identifies the referrers by color: github.com (blue), Google (orange), news.ycombinator.com (green), t.co (red), icsjwctf.com (purple), cisa.gov (pink), cisaicsctf.com (grey), DuckDuckGo (yellow), reddit.com (teal), and Bing (light blue). The data shows significant fluctuations, with a major peak for github.com in late August 2021 and a general upward trend for Google and news.ycombinator.com in early 2022.
