Stargazers

Each data point corresponds to at least one stargazer event. The time resolution is one day.

Forks

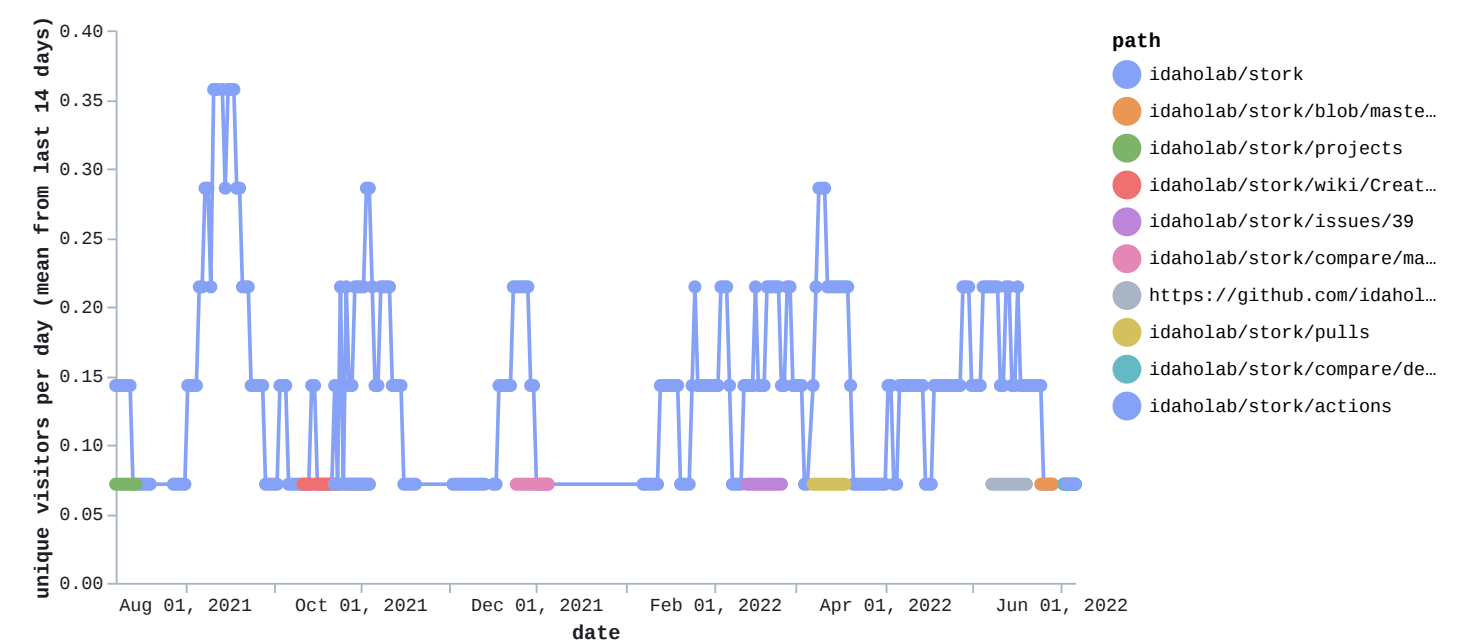

Each data point corresponds to at least one fork event. The time resolution is one day.

Note: Each data point in the plots shown below is influenced by the 14 days leading up to it. Each data point is the arithmetic mean of the “unique visitors per day” metric, built from a time window of 14 days width, and plotted at the right edge of that very time window. That is, these plots respond slowly to change (narrow peaks are smoothed out).

The chart displays the daily mean number of unique visitors from August 2021 to June 2022, categorized by the referrer. The y-axis represents the mean number of unique visitors per day, ranging from 0.00 to 0.35. The x-axis shows the date, with major ticks every two months. The data is color-coded by referrer: github.com (blue), Google (orange), openresearchsoftware.meta... (green), and hub.xn--p8jhe.tw (red). The chart shows significant fluctuations, with several peaks in the number of visitors, particularly from github.com, which reaches its highest point of approximately 0.29 in late August 2021 and late December 2021. Other notable peaks occur in early February 2022 and early June 2022. The data also shows periods of low activity, with the number of visitors dropping to around 0.07 in late September 2021 and late April 2022.
