Each data point corresponds to at least one stargazer event. The time resolution is one day.

Note: Each data point in the plots shown below is influenced by the 14 days leading up to it. Each data point is the arithmetic mean of the “unique visitors per day” metric, built from a time window of 14 days width, and plotted at the right edge of that very time window. That is, these plots respond slowly to change (narrow peaks are smoothed out).

The line plot displays the mean number of unique visitors per day over a 14-day rolling window for three different referrers. The y-axis represents the 'unique visitors per day (mean from last 14 days)' ranging from 0.00 to 0.40. The x-axis represents the 'date' from August 2021 to April 2022. The 'referrer' legend indicates three categories: github.com (blue), Google (orange), and osti.gov (green). The 'github.com' series shows a high initial peak of approximately 0.36 in late July 2021, followed by a period of high volatility with peaks around 0.29 and troughs around 0.07. It then stabilizes at a low level of about 0.07 after October 2021, with a notable spike to 0.15 in late December 2021. The 'Google' series shows a single data point of approximately 0.14 in late December 2021. The 'osti.gov' series shows a single data point of approximately 0.07 in late July 2021. A significant spike in the 'github.com' series occurs in early April 2022, reaching a peak of approximately 0.22.

date	referrer	unique visitors per day (mean from last 14 days)
2021-07-28	github.com	0.36
