Stargazers

Each data point corresponds to at least one stargazer event. The time resolution is one day.

Forks

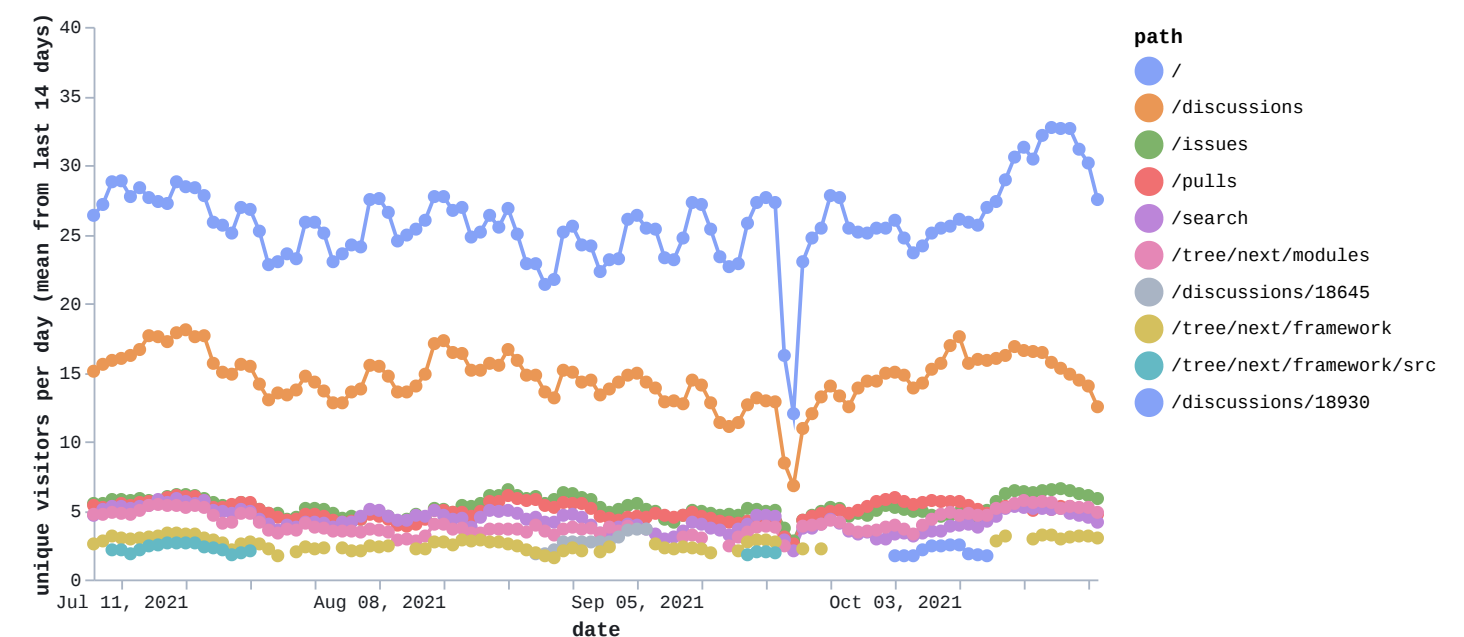

Each data point corresponds to at least one fork event. The time resolution is one day.

Note: Each data point in the plots shown below is influenced by the 14 days leading up to it. Each data point is the arithmetic mean of the “unique visitors per day” metric, built from a time window of 14 days width, and plotted at the right edge of that very time window. That is, these plots respond slowly to change (narrow peaks are smoothed out).

The chart displays the daily mean number of unique visitors from various referrers over a period of approximately two months. The y-axis represents the mean number of unique visitors per day, ranging from 0 to 20. The x-axis shows the date, from July 11, 2021, to October 3, 2021. The referrers are color-coded: mooseframework.inl.gov (blue), Google (orange), github.com (green), moose.inl.gov (red), groups.google.com (purple), civet.inl.gov (pink), DuckDuckGo (grey), Bing (yellow), cn.bing.com (teal), and com.google.android.gm (light blue). The data shows a significant spike in visitors from 'mooseframework.inl.gov' and 'Google' around September 15, 2021, followed by a sharp drop and recovery. Other referrers like 'moose.inl.gov' and 'civet.inl.gov' show lower, more stable visitor counts.
