# Stargazers

Each data point corresponds to at least one stargazer event. The time resolution is one day.

# Forks

Each data point corresponds to at least one fork event. The time resolution is one day.

Note: Each data point in the plots shown below is influenced by the 14 days leading up to it. Each data point is the arithmetic mean of the “unique visitors per day” metric, built from a time window of 14 days width, and plotted at the right edge of that very time window. That is, these plots respond slowly to change (narrow peaks are smoothed out).

The chart displays the mean number of unique visitors per day from ten different referrers over a five-day period in January 2022. The y-axis represents the mean number of unique visitors per day, ranging from 0 to 8. The x-axis represents the date, from Jan 22, 2022, to Jan 26, 2022. The referrers are: linkedin.com (blue), t.co (orange), github.com (green), Google (red), out.reddit.com (purple), Bing (pink), reddit.com (grey), st1.zoom.us (olive), opswat.atlassian.net (teal), and openurl.cn (light blue). linkedin.com and t.co show the highest and most increasing visitor counts, while the other referrers show much lower and more stable counts.
